Copyright and Fair Use

by Frank Sholedice, Assistant Editor

What is copyright?

Copyright laws protect material from unauthorized distribution, copying, or adaptation. Copyright is automatic—as soon as something is set down in a medium (print, film, audio, Internet, etc.), it is copyrighted. If you are quoting or paraphrasing a source, a simple citation is sufficient. However, if you reproduce **any** material that is not your own (e.g., an image, a brochure, a graph), **you must first get permission from the copyright holder**.

How to ask for permission to reproduce something?

The permission to reproduce copyrighted material must be in writing, so send an email or letter to the copyright holder. In your request, describe the material you would like to use, how you plan to use it (including how your material will be distributed), and any other pertinent information (e.g., will you be selling your material). Be sure to keep a copy of the letter or email granting you permission.

Public Domain

Any materials produced by the U.S. government and anything published in the U.S. before 1923 are in the "public domain" and are not copyright protected. You may freely reproduce such materials, but **be sure to include a citation when doing so**.

Fair Use

Fair use is an exception to copyright law that allows for reproduction of copyrighted works for certain purposes—without seeking permission. See http://nmsu.libguides.com/content.php?pid=60019&sid=449716 to learn more.

Creative Commons

Creative commons (CC) is an alternative to regular copyright law that provides more flexibility than the normal "all rights reserved." A CC license holder can specify what level of use to allow (e.g., reproduction for non-commercial use, or adaptation but not reproduction). See creativecommons.org for more and to find CC-licensed material.

Conclusion

Better safe than sorry! If you're unsure if you need permission, it's best to request it anyway. Always document your attempts to seek permission. For public domain or CC-licensed images and other materials, check out http://en.wikipedia.org/wiki/Public_domain_image_resources, creativecommons.org, bugwood.org, www.photolib.noaa.gov, or images.fws.gov.
